RAHAF ALI

Software Engineer | Flutter, Node.js, React, PostgreSQL

Amman, Jordan | +962 79 062 4050 | rahafu722@gmail.com | LinkedIn: linkedin.com/in/rahaf-ali-113ab9405 | GitHub: github.com/Rahaf-Ali22

PROFESSIONAL SUMMARY

Software Engineering graduate (B.Sc., **GPA 3.69/4.00**) with hands-on experience building full-stack web and Flutter mobile applications. Completed a Software Engineering Internship at NeuroVerse, contributing to EduCore, a multi-tenant Learning Management System (LMS). Skilled in REST API development, JWT authentication, role-based access control, and PostgreSQL database design. **Dean's Honor List for four consecutive semesters**. Open to software engineering opportunities (Flutter, Full-Stack, Backend, or Mobile) to build reliable, maintainable software in a collaborative team.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Dart, Java, SQL

Mobile Development: Flutter, Dart, Android build configuration (Gradle, JAVA_HOME)

Web and Backend: React, Node.js, Express.js, REST APIs, Postman

Databases: PostgreSQL, database schema design

Security: JWT authentication, bcrypt password hashing, role-based access control (RBAC)

Tools and Practices: Git, GitHub, Railway (deployment), Agile/Scrum, multi-tenant architecture

Networking: CCNA fundamentals

PROFESSIONAL EXPERIENCE

Software Engineering Intern | NeuroVerse, Amman, Jordan | 2026

Project: EduCore, a multi-tenant school LMS (Flutter, Node.js, Express.js, PostgreSQL) supporting 4 user roles: students, teachers, parents, and school administrators.

- Developed features for the Flutter mobile application and Node.js/Express REST API across student, teacher, parent, and administrator workflows.
- Implemented school administrator and super-administrator registration and role-based access control (RBAC) across the platform's 4 user roles.
- Diagnosed and fixed an authentication bug in the mobile app's login and registration logic.
- Refactored API endpoint configuration into a single reusable class, replacing hardcoded URLs in 15+ files to improve maintainability.
- Resolved Android build issues (JAVA_HOME configuration, file-picker compatibility) and improved the Login and Courses screens.
- Worked in an Agile team using Git and GitHub for version control and collaboration.

PROJECTS

Cognito: Adaptive IT Learning Platform | Graduation Project | React, Node.js, Express.js, PostgreSQL, OpenAI API, Railway

- Built a full-stack IT learning platform with AI-assisted personalization of course content.
- Designed the backend architecture, PostgreSQL database schema, and REST APIs consumed by the React frontend.
- Integrated the OpenAI API to generate personalized learning content.
- Deployed the application on Railway, configuring environment variables and the production database.

EDUCATION

Bachelor of Science in Software Engineering | Jordan University of Science and Technology (JUST) | 2026

- **GPA: 3.69/4.00**
- **Dean's Honor List: four consecutive semesters**

CERTIFICATIONS AND TRAINING

- Cisco: Software Security
- Cisco: Industrial Networking Essentials

- 42 Amman: Discovery Piscine (Web Development, HTML, CSS, JavaScript, Git) | 2026
- CCNA 200-301: preparation in progress

LANGUAGES

Arabic: Native | English: Intermediate (B1)
